

| Issue # | Heuristic #                | Description   | Rating |  | Evaluator: Andrea Bruno, Seat 'n' Eat |  |  |
|---------|----------------------------|---|--------|--|---------------------------------------|--|--|
| 1       | H1 ("next steps" feedback) | When a test/exercise is completed successfully, add a button to return back, and maybe leave the "try again" button if the user wants to repeat the exercise even if was done correctly.  | 2      |  |                                       |  |  |
| 2       | H2                         | "Test" category may be misleading, it may seem to lead to a microphone hardware test  | 3      |  |                                       |  |  |
| 3       | H4                         | Ok/No buttons can have more descriptive names   | 1      |  |                                       |  |  |
| 4       | H1 / H4                    | Exercises don't show the accuracy percentage of the execution, instead this value is shown during tests   | 2      |  |                                       |  |  |
| 5       | H4                         | In the "focus exercises" page, when a track is reproduced, there's no icon that shows the behaviour of the button (if the track stops and can be resumed, or if the execution can't be resumed)   | 2      |  |                                       |  |  |
| 6       | NH                         | In the "focus exercises" page, it may be useful to be able to restart the recording after pausing it, to be able to automatically resume the "playlist". Since this is a domain-dependent feature, it may not be useful, or even confusing to the user, so it may not even be a violation at all. | 0      |  |                                       |  |  |
| 7       | NH                         | In the "Statistics" page, the graph should explain what it's showing  | 1      |  |                                       |  |  |
